UNVERIFIABLE

EVERY REFERENCE, CHECKED

REF.	SOURCE	CITED IN	REACHABLE	RELEVANCE	AGREEMENT	RESULT
R-01	NWS Local Storm Reports	Row 1, Row 3, Row 4	yes (200)	PASS - covers the researched date and search area	PASS - tabled magnitudes and times match the source	PASS
https://mesonet.agron.iastate.edu/geojson/lsr.geojson						
R-02	SPC Storm Reports	Row 2, Row 6	yes (200)	PASS - date-specific report page	PASS - gust values agree with the tabled rows	PASS
https://www.spc.noaa.gov/climo/reports/260514_rpts.html						
R-03	NCEI Storm Events	Row 5, Row 7	yes (200)	PASS - details file for the DOL year is published	PASS - certified magnitudes agree	PASS
https://www.ncei.noaa.gov/pub/data/swdi/stormevents/csvfiles						
R-04	CoCoRaHS	—	yes (200)	PASS - queried; no reports in the search area on this date	PASS - nothing cited from this source	PASS
https://data.cocorahs.org/export/exportreports.aspx						

The audit covers 100% of references cited by the report. It is never a sample — a sampled audit cannot tell you the reference you are about to rely on was the one checked.

REMIEDIATIONS

None. No reference required remediation on this report.

HUMAN REVIEW

References drawn for independent re-check by a person, at the original agency: **R-02, R-03**. The draw is seeded on the report ID (WDR-SAMPLE) so it is reproducible and cannot be quietly re-rolled until a convenient set comes up. Remediated references are re-checked in addition to the draw and do not count toward the required minimum.

RELEASE CHECK

Clear to release - no open findings, and the two mandatory human source checks are logged. Every report is held here until a person has re-checked the drawn references at the original agency. Nothing auto-releases.

INTEGRITY

Audit hash 9f2c47ab1e6d05b3 · tool version 1.0-beta · audited 2026-05-15T09:14:22.

The hash is taken over the audit payload itself, so an altered audit record does not match the hash printed here or the copy retained by Weather Data Research.
